

# Balnea Spa Enclosures Free-Standing Screened Spa Gazebo Kits

Starting at:

**\$7365.00** **\$6996.75**

Credit Card

Certified Check

**Highest Quality**

**5 Year Limited Warranty**

This Spa Gazebo Kit has a **Roof Structure** that is made of 1 1/2" square extruded aluminum with a baked on enamel finish. **Once up, there is no need to take it down!**

Our Hot Tub Gazebos have a **Super Vent** in each roof panel located at the peak of the roof, allowing for the escape of wind and humidity. This makes them ideal to use as hot tub gazebos.

The Balnea hot tub gazebos have a cover that will last up to 15 years in normal conditions. **Designed to stay up all year round, this 22 oz vinyl** is made to last by incorporating over 4 million stitches. It is also flame retardant (NFPA 701), UV resistant to prevent yellowing, tear and abrasive resistant and we have incorporated an "anti-wicking" agent to prevent mold and mildew. Need more? Okay, finally there is a special cold crack resistant additive to the vinyl so that the top can withstand temperatures as low as -50°F. Of course it is guaranteed for 5 years against discoloration.

An excellent hot tub enclosure!

**Cover Color Choices**

Green, Ivory, Beige

Navy Blue or Burgundy

**Frame Color Choices**

Beige or White

## Highest Quality

- This screen room gives you a clear line of sight, no eye-level support bars, because the panels are made with the highest quality extruded aluminum and engineered for maximum strength.
- The frames made with extrusion dies exclusive to these kits are wide enough to incorporate fully framed sliding polymer windows.
- Left side hinged heavy duty in-swinging door is standard. The door has a lockable easy entry handle.
- The heart of the quality of this screened enclosure is its roof tightening system which allows you to maintain a tight roof all the way around the unit. It is ingeniously easy and stretches the roof over its supports without exposing the roof to rough edges or corners. A patented "over and under" roof tightening system allows you to keep your cover looking good year after year. We call it our FLASH system because it is quick and easy!
- Of course our Flash system is part of a 6" overhang built in all the way around the screen enclosure preventing water runoff from flowing down the screen face.
- Panels snap fit together fastened with finishing hex screws for support, rigidity and strength: no cables or plastic pieces.
- Roof support assembly is made of 1 1/2" square extruded aluminum poles all coming together in the peak in a specially designed extruded aluminum hub.
- This roof's overhang, pitch and tensioning system combine to virtually eliminate water accumulation on the roof.
- Very high quality, long lasting, easily assembled within a day.
- Vinyl top color choices: green, blue, eggshell, burgundy & beige

Obtaining necessary permits is the sole responsibility of purchaser. Customers agree to hold ScreenHouses Unlimited and manufacturer free of any liability for improper installation, maintenance and repair.

## 5 Year Warranty—All Major Materials

This spa gazebo kit also has a **6" Overhang** built into every unit, preventing the rain from washing down the screen face. Also as part of the overhang is our aesthetically pleasing **Double Valence**, where the second valence is white and is part of our special roof attach system. Our valences can be the wave format or straight - your choice.

Used as hot tub gazebos, these screened patio enclosures are made with **1/8" thick Extruded Aluminum!** Made to last! Our Balnea screened patio enclosures come with **Sliding Polymer Windows**. Fully framed, the polymer is made especially for us with a Japanese calendaring process. It is made with a super double clear polish in either clear or smoke and has a 20 ml thickness - virtually unbreakable! Of course, in keeping with the quality of the rest of this spa gazebo kit, the polymer windows are UV resistant, crack resistant up to -30°F, fire retardant and has the anti-wicking agent to prevent mold and mildew. The windows slide sideways and are designed to be left in place, just like the whole unit, for the winter
